## EDUCATION

### University of Central Florida

Bachelor of Science in Computer Science, **GPA 3.9**

Knight Hacks Member

Orlando, FL

August 2023 – May 2027

September 2023 – Present

## WORK EXPERIENCE

### AI Intern

*Yellow.AI*

July 2025 – January 2026

Remote

- Contributed as part of a collaborative team deploying AI voice and chat bots.
- Automated monitoring using **Python scripts** with the **Gemini API**, noted for saving **weeks** of conversation monitoring.
- Used **Cekura.AI** for **unit testing**, providing AI-driven testing benchmarks.
- Assisted in **prompt engineering**, writing complex logical rules for bots to follow.
- Assisted in a wide range of the production process such as development, debugging, testing, and analytics.
- Debugged the conversation logs, documenting and analyzing both client-side and server-side issues.

## PROJECTS

### Knighthoot | *MERN Stack, Github, Project Management*

October 2025 – November 2fdshcki025

- Was the **team lead of a group of 7**, coordinating a full-stack web and mobile platform.
- Worked with the team to develop a syncing pipeline between multiple clients and the server.
- Managed a **Ubuntu** web server on DigitalOcean with a **MongoDB** database and **HTTPS port forwarding**.
- Earned a grade of **100/100** and received appraise from the professor for going above the project expectations.

### Lightning Search | *Python, C++, PyTorch, LibTorch, Sockets*

December 2025 – Present

- Developed a full-stack search engine built from scratch with C++ sockets, utilizing **Exa Search**.
- Trained a large word autocomplete neural network model and implemented in the server.
- Loaded the model in the server through LibTorch.

### FSPOT | *C++, HTTP Requests, Optimization*

August 2024 – October 2024

- Developed a full-feature Spotify TUI Client with integration to the **Librespot receiver**.
- Optimized the program to use **30mb of RAM** as compared to Spotify's **600mb**, reducing memory footprint of listening to music by **2000%**.

### One Piece Summarizer | *Python, Machine Learning*

October 2023

- Coordinated a **group of 3** to deploying a machine learning model.
- Worked under tight time constraints, finishing the project in **just 36 hours**.
- Led the team to winning the 2023 Knight Hacks Hackathon Frying Pan award.

## TECHNICAL SKILLS

**Languages:** Python, C/C++, SQL (MongoDB), JavaScript, Bash

**Libraries:** PyTorch, LibTorch, Boost Library, Pandas, NumPy, Matplotlib, JSON

**Frameworks:** React, Node.js, Express.js

**Developer Tools:** Git, Github, VS Code, CMake, OpenSSL
